

# Coordinated Regional Climate Downscaling Experiment (CORDEX) for South Asia

**Sabin TP**

Centre for Climate Change Research, Indian Institute of Tropical Meteorology

Email: [sabin@tropmet.res.in](mailto:sabin@tropmet.res.in)

- **Data for these assessments..**
- **& when we need to address the science of climate change...**
- **& to carryout impact assessment studies ...**
- **& to provide various services**

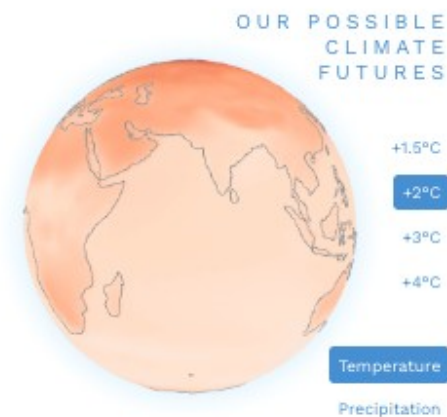

## IPCC WGI Interactive Atlas

A novel tool for flexible spatial and temporal analyses of much of the observed and projected climate change information underpinning the Working Group I contribution to the Sixth Assessment Report, including regional synthesis for Climatic Impact-Drivers (CIDs).

# CORDEX Domains

The main CORDEX protocol includes a set of 14 continental-scale domains covering essentially all land areas of the globe.

Region 1: South America

Region 2: Central America

Region 3: North America

Region 4: Africa

Region 5: Europe (EURO)

Region 6: South Asia

Region 7: East Asia

Region 8: Central Asia

Region 9: Australasia

Region 10: Antarctica

Region 11: Arctic

Region 12: Mediterranean (MED)

Region 13: Middle East North Africa (MENA)

Region 14: South-East Asia (SEA)

## Region 6: South Asia

# Regional Climate Information for Application Studies

## CORDEX South Asia

**Ref:** [Description of the CORDEX domains](#)  
(23/10/2015 version)

### A) For rotated polar RCMs (in rotated coordinates):

RotPole (236.66; 79.95)

TLC (327.88; 35.20)

Nx=193

Ny=130

### B) For non-rotated polar RCMs (in actual coordinates):

TLC (19.88; 43.5)

CNB (68.41; 45.07)

TRC (115.55; 41.0)

CWB (23.48; 15.51)

CPD (67.18; 16.93)

CEB (110.47; 13.09)

BLC (26.19; -12.97)

CSB (66.29; -11.66)

BRC (106.43; -15.23)

**CORDEX actively involved in production of regional climate information** and involve in dialogue with regional impact communities, stakeholders and authorities.

**CORDEX goals include interaction with users of regional climate information**, through which **CORDEX will be able to cater for climate service** perspective.

The main four CORDEX goals include

- i) understanding relevant regional/local climate phenomena,
- ii) improving regional climate downscaling models and techniques,
- iii) producing coordinated sets of regional high-resolution downscaled projections worldwide and
- iv) fostering communication and knowledge exchange with users of regional climate information.

# Regional Climate Information for Application Studies

## CORDEX South Asia

The CORDEX vision is to advance and coordinate the science and application of regional climate downscaling through global partnerships.

### Downscaling regional climate information for impact assessment studies

### The CORDEX community

The CORDEX community has grown to now include 13 domains;

- Arctic CORDEX
- North America CORDEX
- Central America CORDEX
- EURO-CORDEX
- MED-CORDEX
- CORDEX Africa
- MENA-CORDEX
- Central Asia CORDEX
- South Asia CORDEX
- East Asia CORDEX
- Australasia CORDEX
- South America CORDEX
- CORDEX Antarctica

IITM is coordinating the CORDEX South Asia activities.

50/22 km resolution simulations based on CMIP5-RCP scenario &, 27 km simulations based on CMIP6-SSP scenarios, and 15 km RegCM-based simulations.

Simulation cover historical and future periods, following the established CMIP and CORDEX protocols.

More information for CORDEX South Asia data access from CCCR-IITM Climate Data Portal and ESGF data node are provided at:

[http://cccr.tropmet.res.in/home/cordexsa\\_datasets.jsp](http://cccr.tropmet.res.in/home/cordexsa_datasets.jsp)

# Similar to CMIP: simulations designed to address science of climate change

## Historical (1860-2014):

*Includes natural and anthropogenic (GHG, aerosols, land cover etc) climate forcing during the historical period (1860 – 2014)*

**Future simulations also follows the CMIP protocols**

### Scenarios

#### The philosophy Behind SSPs..

- AR5 used the RCPs
- AR6 has the SSPs

\*SSPs stands for two things: either just the socio-economic narrative, or a particular SSPX-Y scenarios, such as SSP1-1.9.

Role of CMIP programme of WCRP  
CORDEX also follows this

Expected CO<sub>2</sub> concentrations under various future scenarios

Expected Aerosol concentrations under various future scenarios

In the future, CO<sub>2</sub> is expected to increase irrespective of the scenario, whereas aerosol levels are expected to decrease

# CORDEX South Asia Data Access and Analysis Tools

## ESGF Data Extraction Tool

<http://cccr-dx.tropmet.res.in:8000/projection/>

Web Interface based on python developed by CCCR-IITM for users to explore and remotely access subsets of CORDEX South Asia datasets published on ESGF

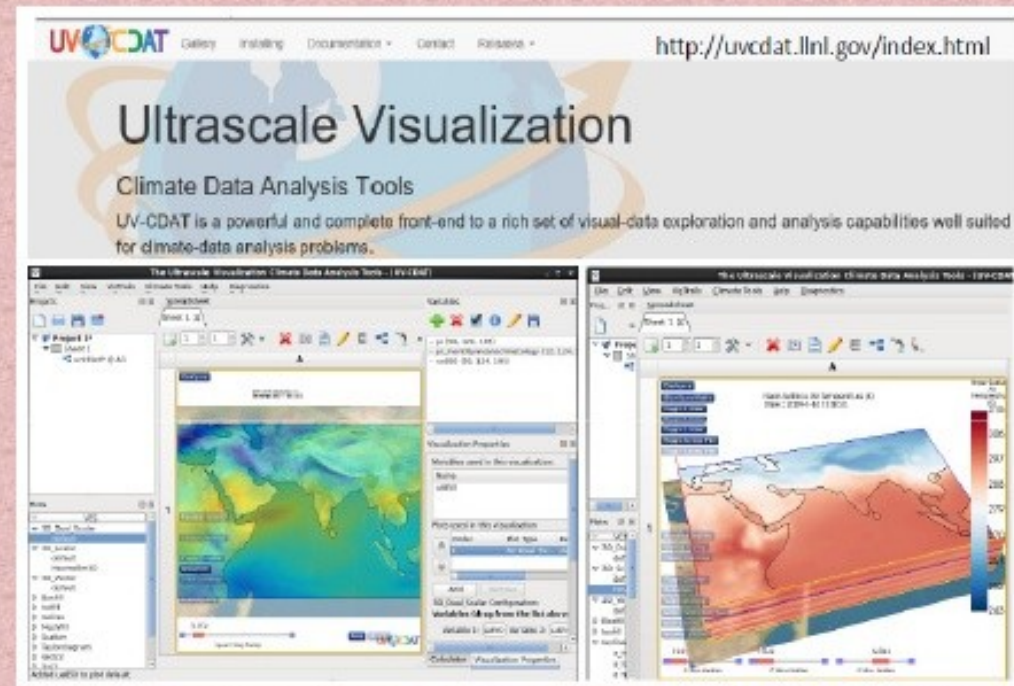

ESGF OpenID  ESGF Password

Project  Institute

Time\_frequency  Experiment

Variable  Domain

Driving\_Model

## How to access the data

An initial focus of the CORDEX initiative was to establish a central data archive, which was supplemented by regional data portals. However, it soon became clear that a geographically distributed archiving system such as the Earth System Grid (ESGF) would offer much greater flexibility for the provision of climate data. The CORDEX data archiving progress was discussed in detail and the SAT strongly recommended the use of ESGF as the main tool for providing CORDEX data to users. However, a number of CORDEX simulations for different CORDEX domains were completed before CORDEX-ESGF archiving infrastructure was in

[How to access the data](#)[ESGF](#)[Impact Portals](#)[Regional Data Portals](#)[Individual institutes](#)[CORDEX RCM List](#)[CORDEX data on ESGF](#)[Bias-adjusted RCM data](#)[Regional Climate Change simulations for CORDEX domains](#)[ACCESS](#)[How to access the data](#)[ESGF](#)[Impact Portals](#)[Regional Data Portals](#)[Individual institutes](#)[CORDEX RCM List](#)[CORDEX data on ESGF](#)[Bias-adjusted RCM data](#)

ESGF is an up-to date scientific infrastructure for distributing climate data and will now become WCRP's main tool for providing global and regional climate simulations together with observations and reanalyses over the next decade. At the first CORDEX Science Advisory Team (SAT) meeting in May 2014 the CORDEX data archiving progress was discussed in detail and the SAT strongly recommended the use of ESGF as the main tool for providing CORDEX data to users. However, a number of CORDEX simulations for different CORDEX domains were completed before CORDEX-ESGF archiving infrastructure was in

## CORDEX South Asia data is available on the CCCR-IITM Climate Data Portal (non-ESGF):

### About Climate Data Portal

[http://cccr.tropmet.res.in/home/old\\_portals.jsp](http://cccr.tropmet.res.in/home/old_portals.jsp)

The CCCR Climate Data Portal is designed to facilitate the dissemination of climate information using a publicly accessible FTP and web-based interface. [click here](#)

[http://cccr.tropmet.res.in/home/docs/cordex/Table\\_CORDEX\\_Expts\\_all.doc](http://cccr.tropmet.res.in/home/docs/cordex/Table_CORDEX_Expts_all.doc)

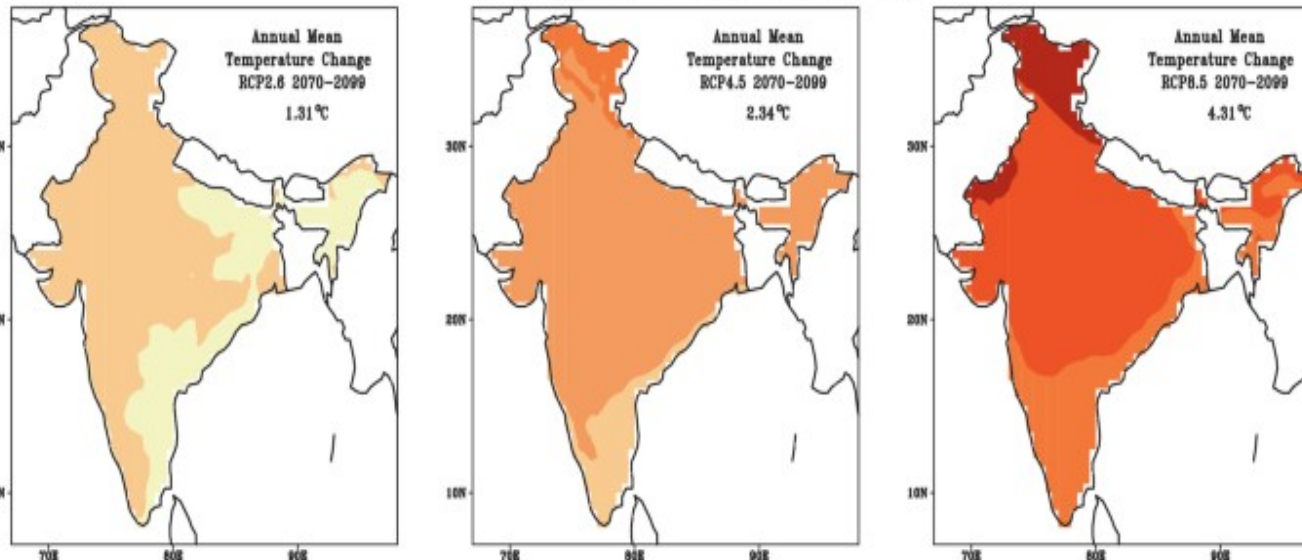

# Projections of annual average surface air temperature changes

Inference from  
**CORDEX**  
simulations

Near future (2040–2069)

Far future (2070–2099)

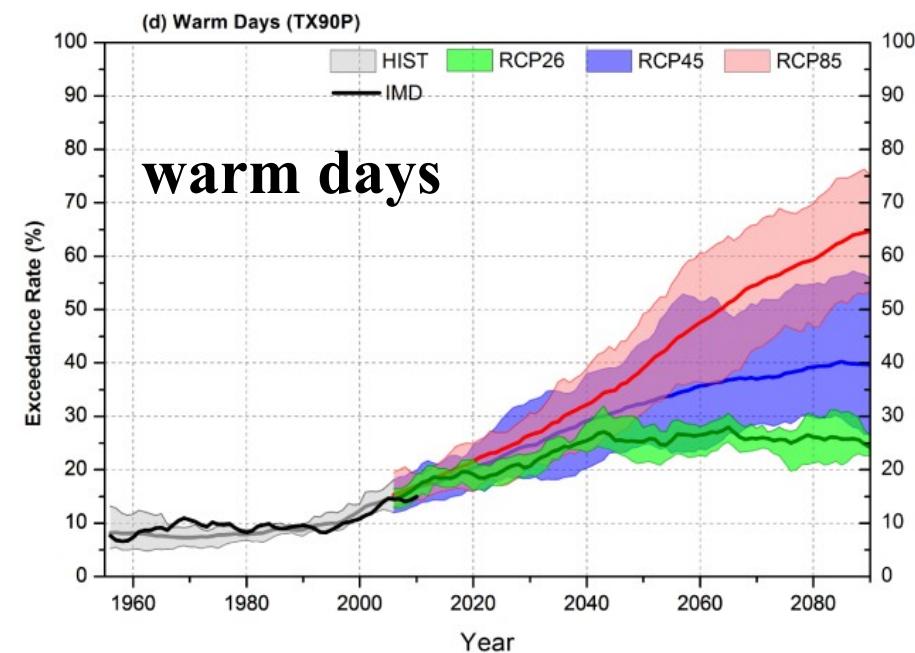

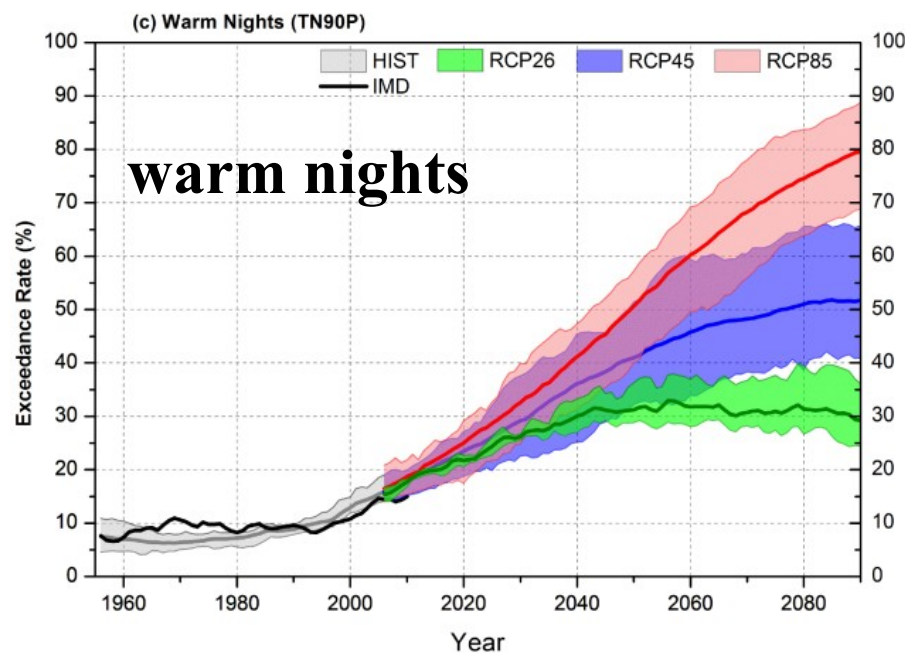

Near future (2040–2069) and far future (2070–2099) climate relative to 1976–2005 under RCP2.6, RCP4.5 and RCP8.5 emission scenarios. The estimates of all India averaged ensemble mean projected changes are shown in each panel

# Projected cold & warm days/nights

India averages  
of  
temperature  
indices over  
land as  
simulated by  
the CORDEX  
South Asia  
multi-RCM  
ensemble

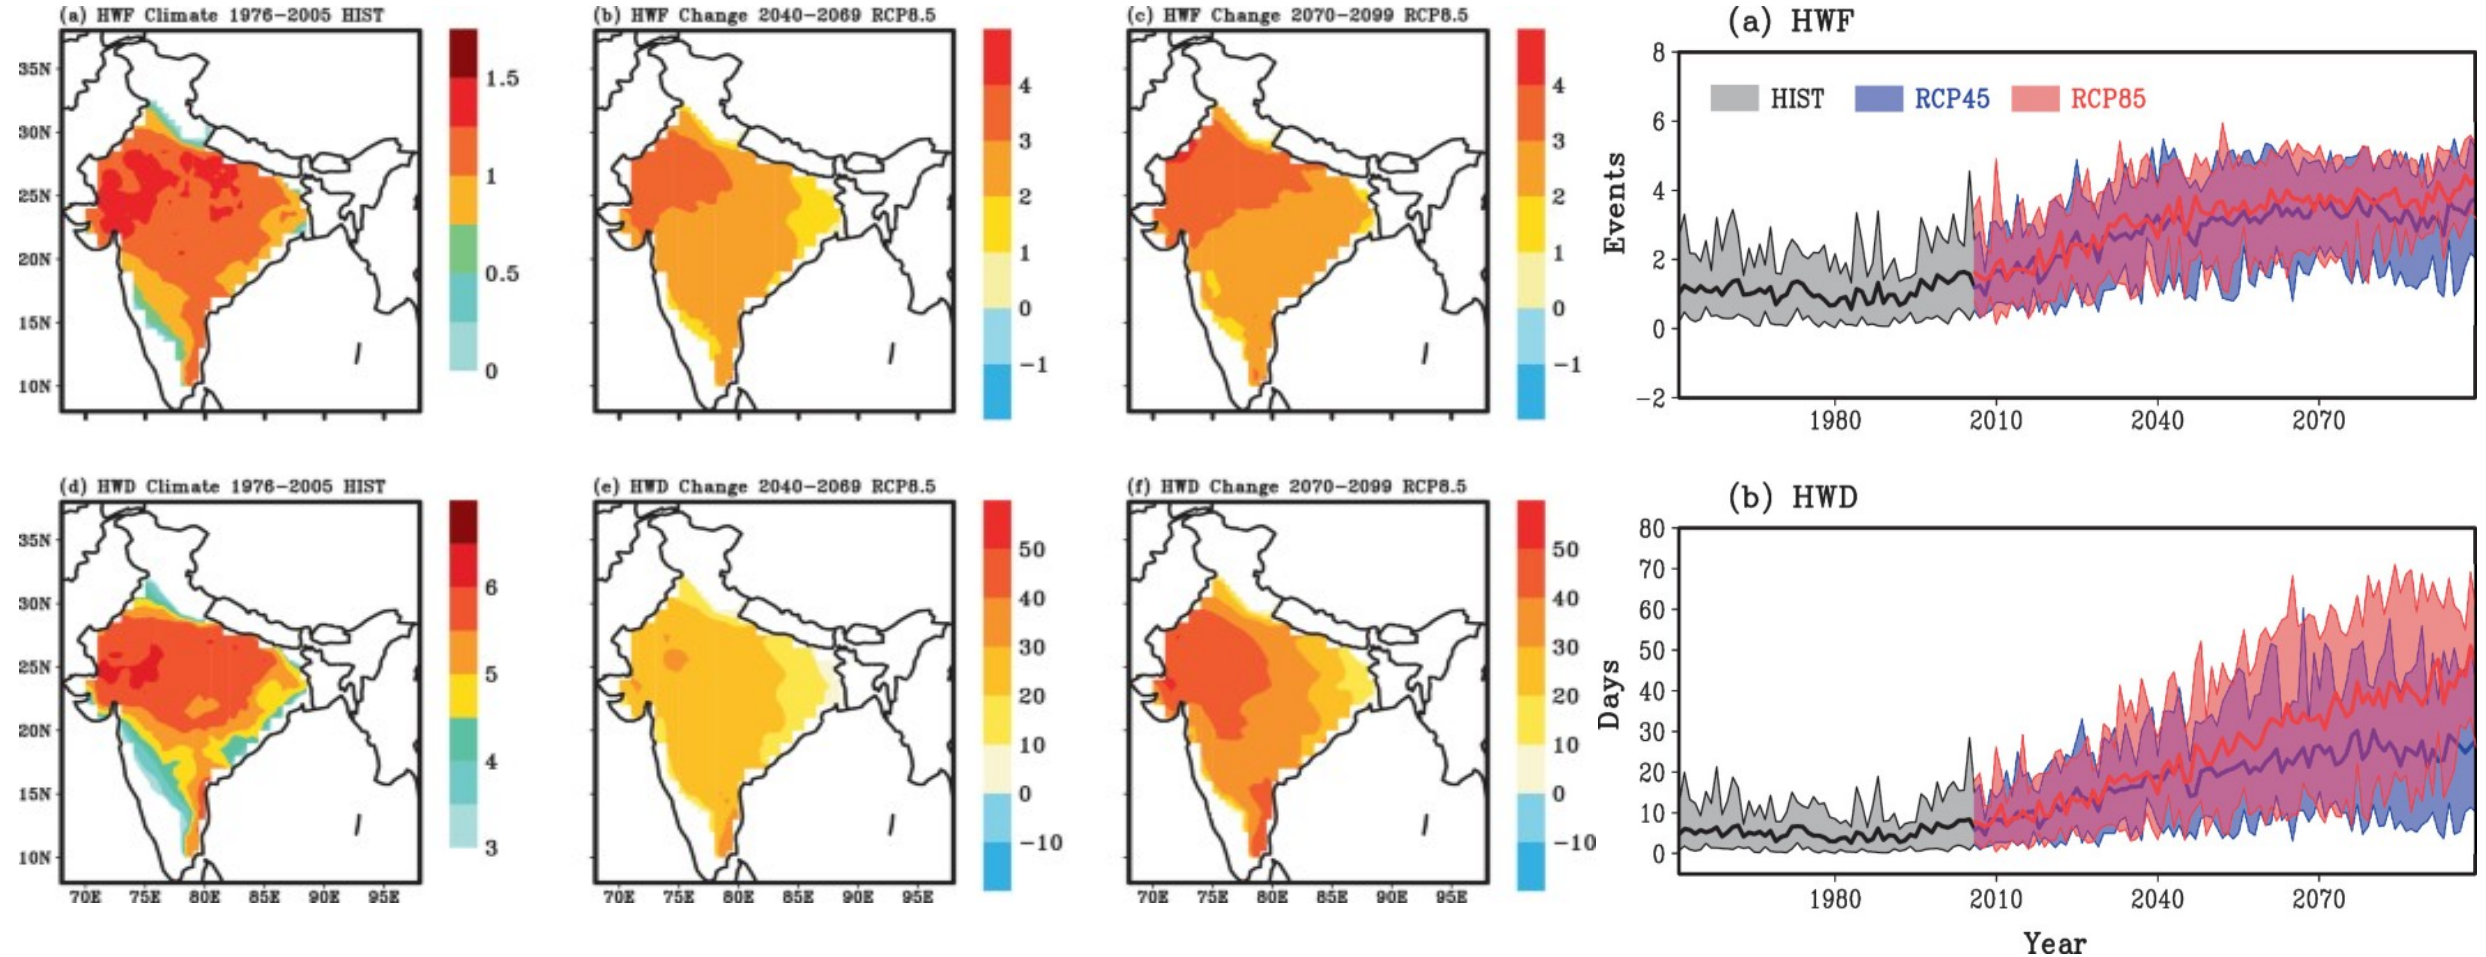

Inference from  
CORDEX  
simulations

# Heatwave frequency (HWF; events per season) and heatwave duration (HWD; days per season)

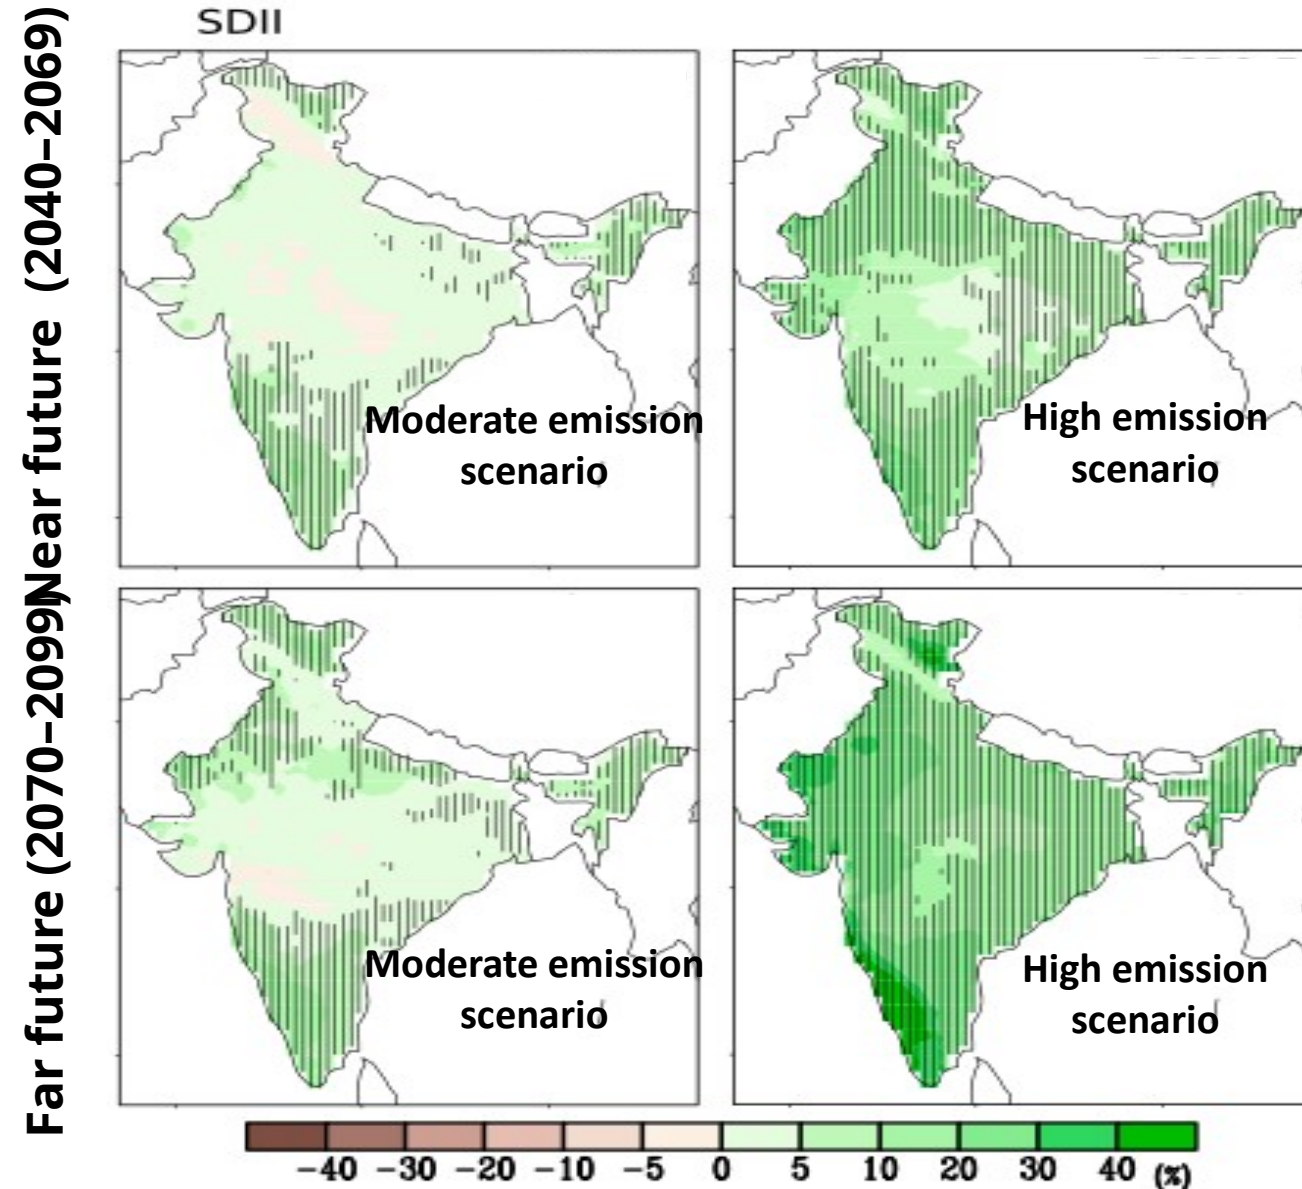

Inference from  
**CORDEX**  
simulations

CORDEX South Asia multi-RCM projections of the summer (April–June) based on the historical simulations during 1951–2005

# Relative changes in the Daily Intensity Index (SDII) for Near Future and Far Future with respect to 1976–2005 reference period

Inference  
from  
CORDEX  
simulations

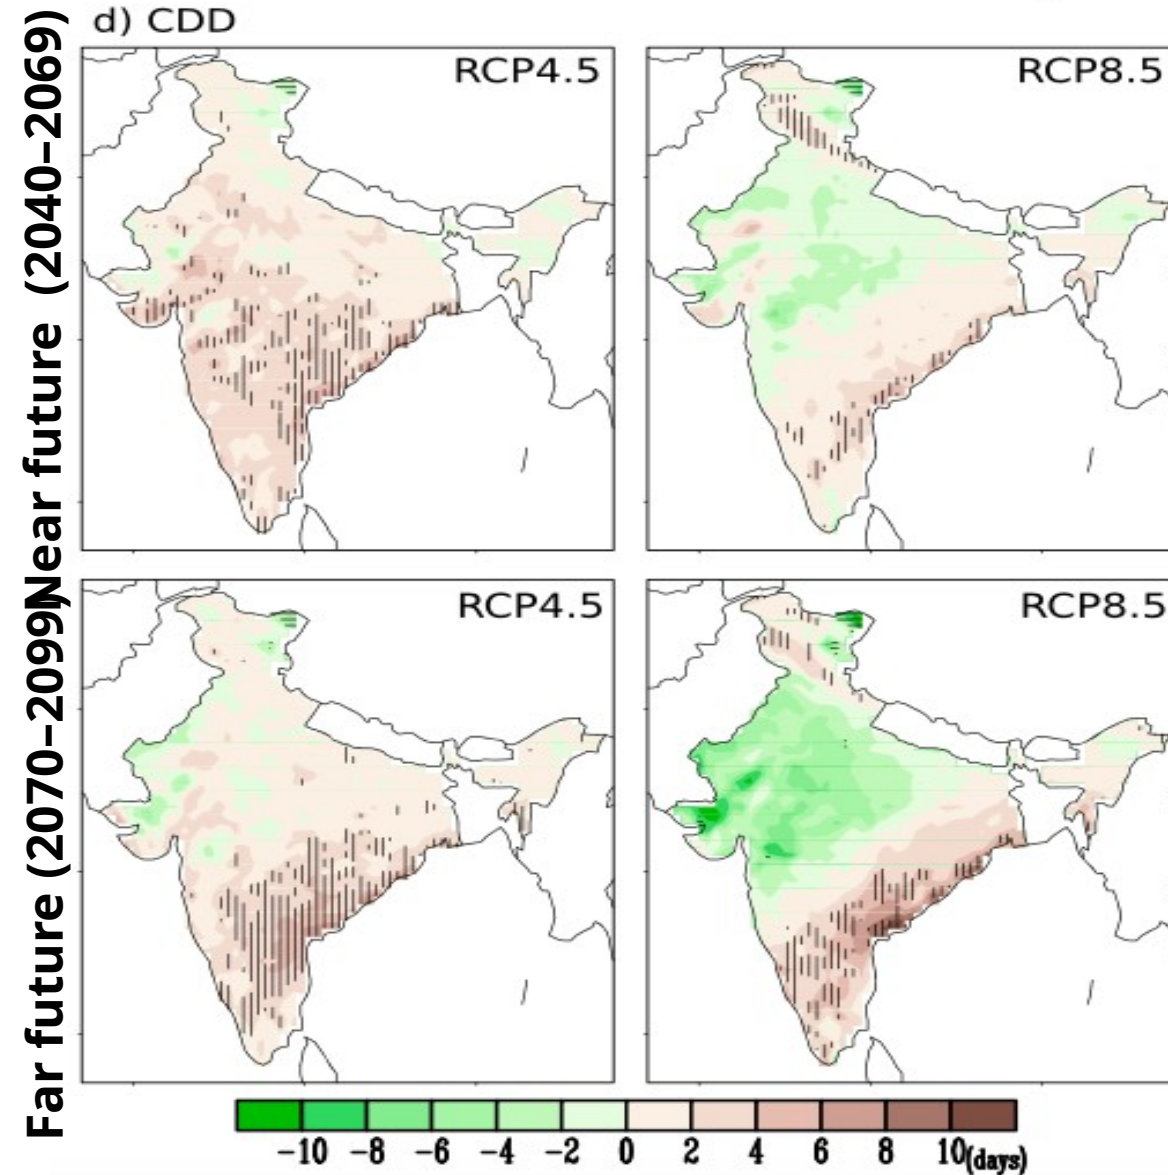

The value obtained by dividing the total rainfall in a season by the number of rainy days in a season. If the SDII is increasing, it can be assumed that it has rained more in a few days. It has to be assumed that conditions such as floods may increase. Models estimate that rainfall intensity (SDII) may increase by 21% by the end of the 21st century.

Sum of precipitation in wet days, and dividing that by the number of wet days

# Relative changes in the Consecutive dry days (CDD) for Near Future and Far Future with respect to 1976–2005 reference period

Inference  
from  
CORDEX  
simulations

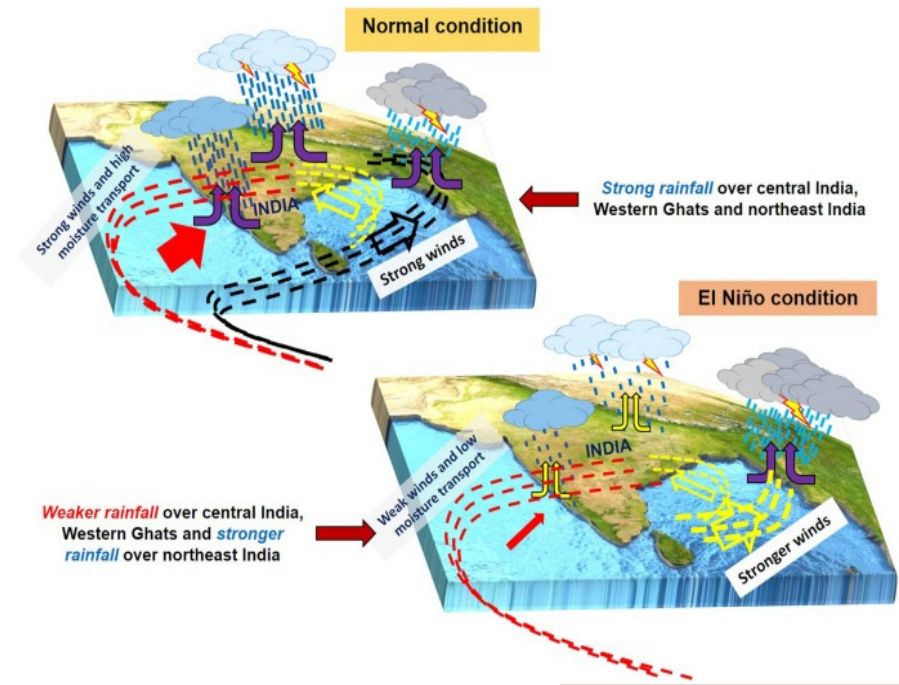

Consecutive dry days are used to describe the duration of precipitation extremes according to the daily precipitation.

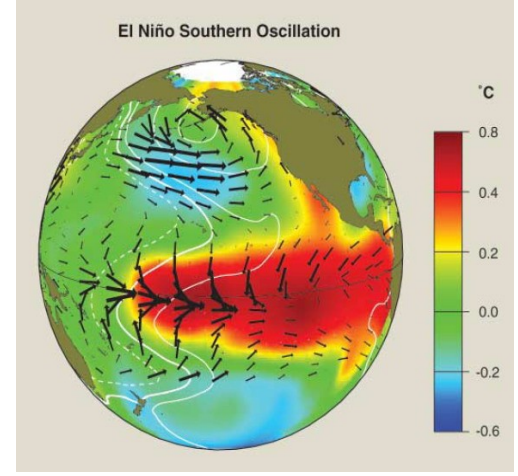

CDD means the maximum number of consecutive days with precipitation less than a certain threshold

# **Regional downscaling & our alternative approach**

The year to year variations in the seasonal (June – September) summer monsoon rains over India are influenced internal dynamics and external drivers

This implies the need for global models to better understand the monsoon

Regional Downscaling

IITM-ESM with T62

High-resolution global Atmospheric model

T574 ~ 27km

Global model  
High-resolution global      Atmospheric model

Global forcing's:  
CO2/Aerosols/LULC

Global climate information  
(in a 27km horizontal resolution)

Which will be used for regional studies

Region 6: South Asia

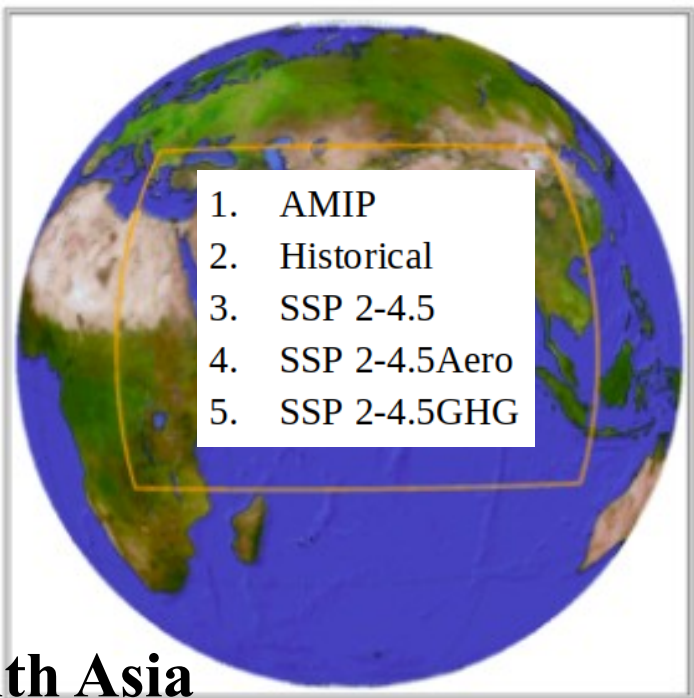

- Dynamical downscaling of IITM-ESM v2 CMIP6 historical simulation (1951-2015) using the high-resolution (27 km grid) atmospheric component of IITM-ESM v2 is nearing completion.
- This is an important activity which CCCR initiated to produce high-resolution climate simulations towards various assessments for the country, along with addressing some scientific issues

The normal Global model horizontal grid

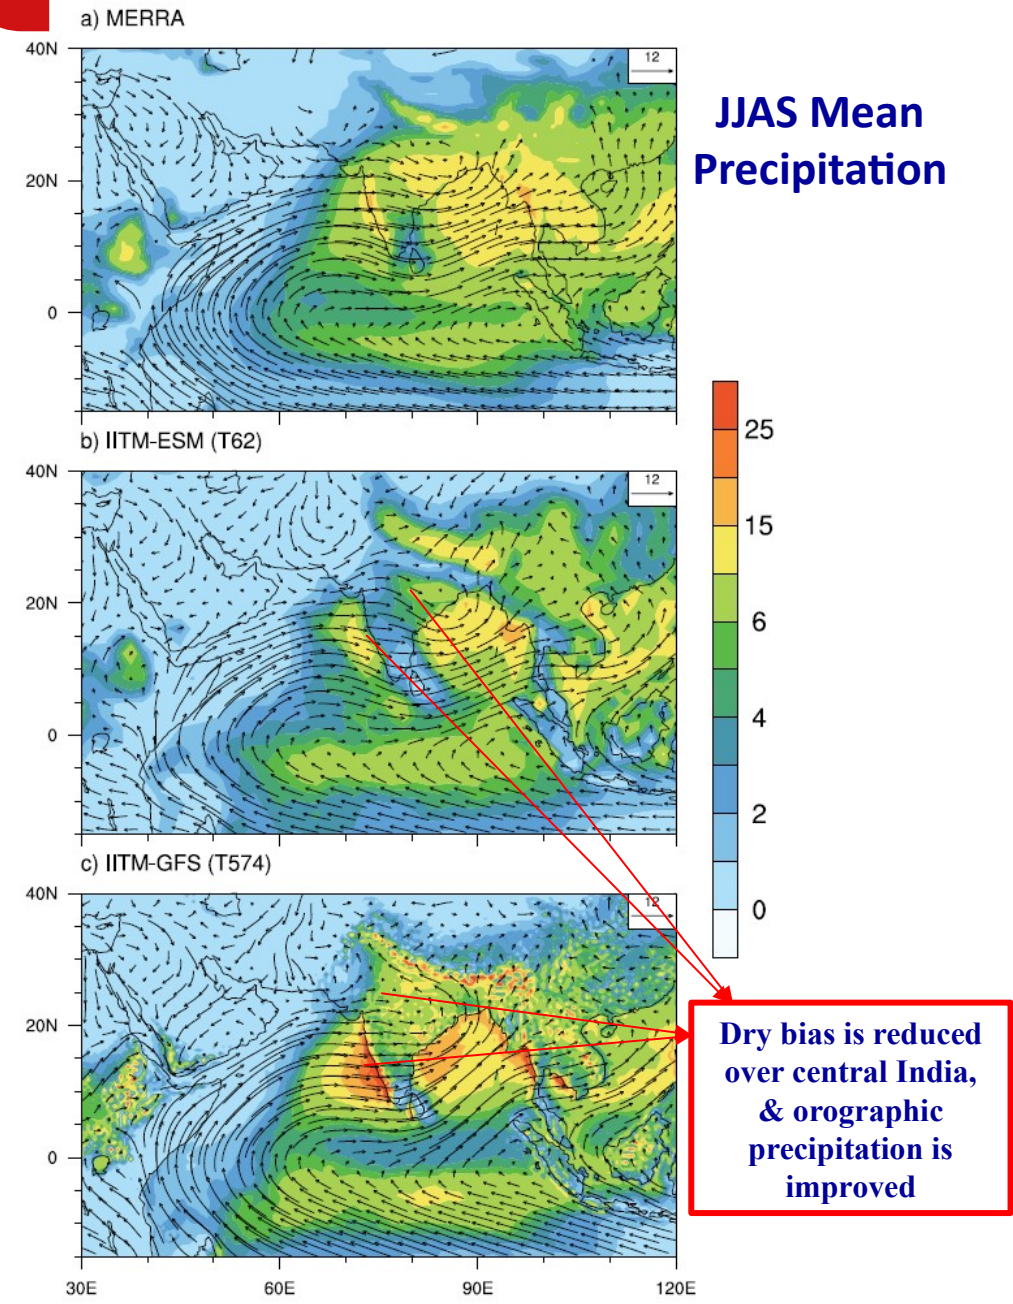

The high resolution global model horizontal grid

South Asia

Clear improvement is visible in the simulated precipitation pattern in the high-resolution model

Narrow orographic precipitation over the western Ghats and precipitation over the monsoon trough is significantly improved in the 27km version

## Bias in simulated wintertime surface temperature.....

## Bias in simulated wintertime precipitation.....

a) T2m difference for DJF (CMIP5-CRU)

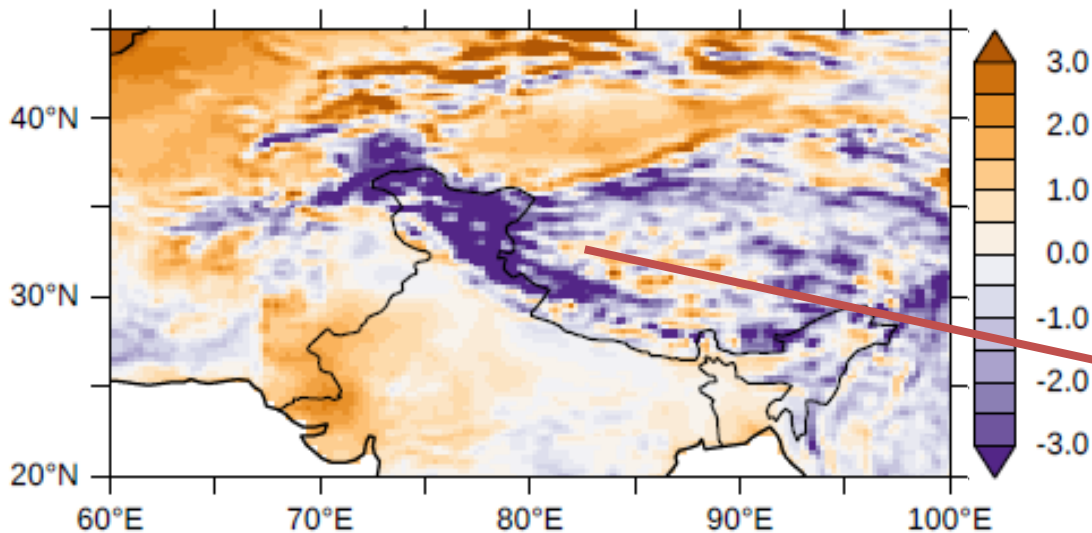

**CMIP models  
shows large  
cold bias over  
Himalaya during  
wintertime**

**CMIP models  
shows large  
wet bias over  
Himalaya during  
winter months**

**Bias in simulated  
precipitation is  
relatively less in the  
IITM-GFS**

**Cold bias is  
reduced  
considerably  
in the IITM-GFS**

b) T2m difference for DJF (IITM GFS-CRU)

a) Precipitation difference for DJF (CMIP5-APHRODITE)

b) Precipitation difference for DJF (IITM GFS-APHRODITE)

Inter-annual variability of Indian summer monsoon

➤ Model is able to capture the annual fluctuations of Indian summer monsoon reasonably well

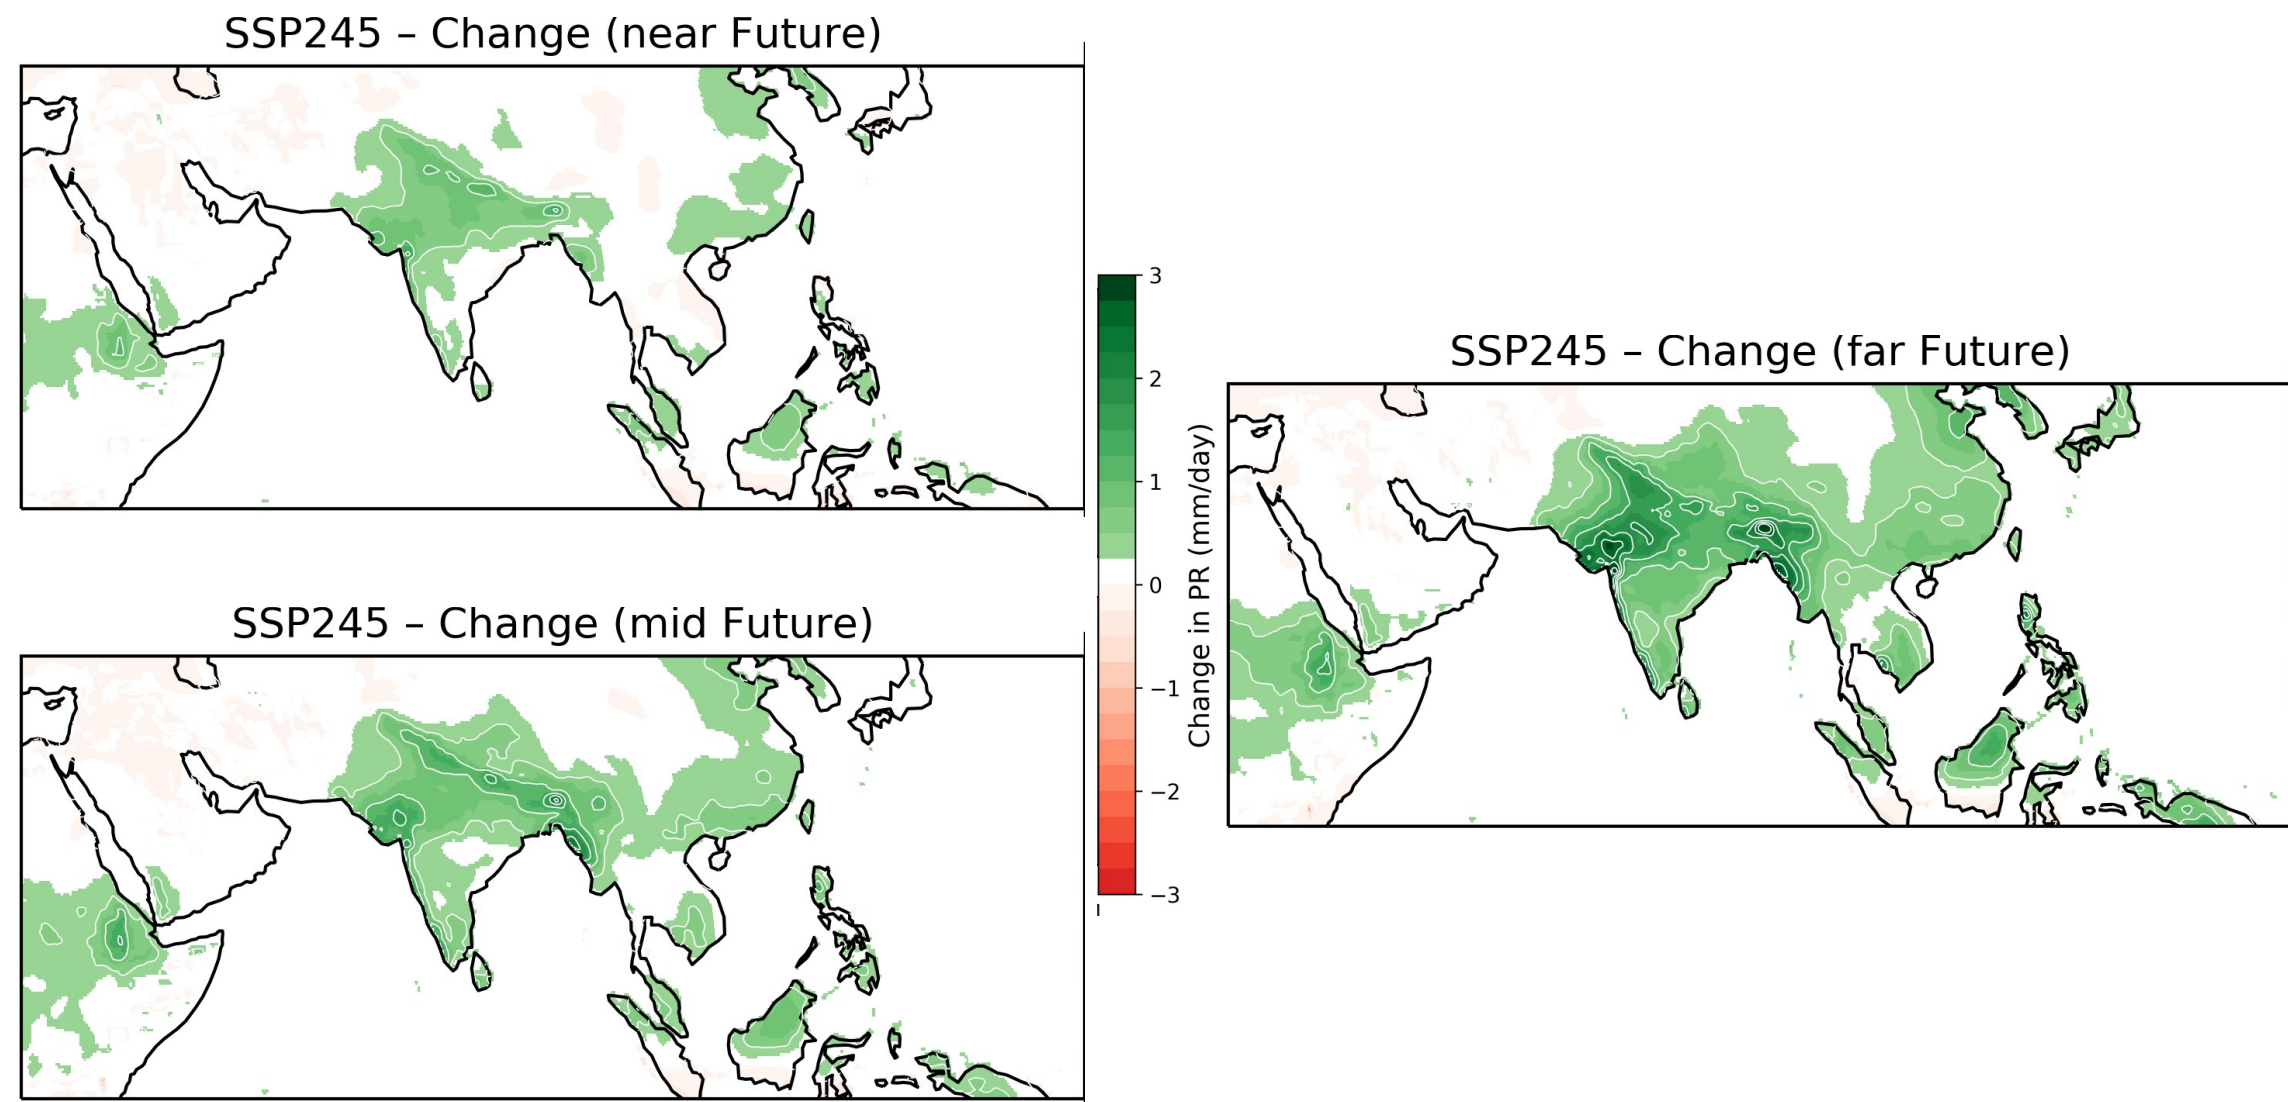

North Indian ocean Tropical cyclones

➤ 27 km model is able to capture the NIO - TC's

This simulation seems to be OK if we are making an assessment over a larger domain covering India and the adjoining regions

Observation

CNN

The mean summer monsoon pattern shows improvement, but it remains underestimated, particularly over central India. In contrast, the wintertime precipitation bias is better represented after bias correction.

Mumbai

Delhi

North of Delhi covering Himalaya

Chennai

Missoram

Annual cycle of precipitation

- **CORDEX provides an important opportunity to carry out regional climate assessments, which in turn allows for the critical evaluation of climate models and ultimately enhances the quality of simulations with improved regional detail.**
- **The newly generated datasets, we will make it available to users through the CORDEX platform or through our IITM's internal server.**
- **If SAHF can frame a uniform analysis approaches, enabling the development of a consensus-based climate assessment that would mark a significant step forward in advancing regional climate understanding over this complex domain.**

**Thank you**
